ClauseGuard

The contract review small businesses can't afford — in 30 seconds.

Aurora PostgreSQL + pgvector RAG · Bedrock

ClauseGuard

▶ clauseguard.vercel.app · github.com/manojmallick/clauseguard

THE PROBLEM

— Why this is hard

Small businesses sign risky contracts blind — they cannot afford a \$400/hr lawyer.

Most "AI clause checkers" do a vector lookup and return canned text.

They cannot flag anything outside their seed list — or admit what they do not know.

THE SOLUTION

— How it works

1

Retrieve

pgvector finds the most similar known-risky clause patterns.

2

Abstain

If the match is weak it says "needs human review" — never invents legal risk.

3

Generate

Bedrock Claude writes a finding + redline for THIS clause, grounded on the patterns.

ARCHITECTURE

— End to end

WHY AURORA POSTGRESQL +

A second pgvector search over the org's OWN past contracts surfaces "you accepted this before" — relational + vector in one query path.

TECH & DIFFERENTIATION

— Built with

Next.js 16

TypeScript

Aurora PostgreSQL

pgvector

Bedrock Titan + Claude

Vercel

WHY THIS DATABASE

A second pgvector search over the org's OWN past contracts surfaces "you accepted this before" — relational + vector in one query path.

THE EDGE

True RAG with calibrated abstention + a redline diff that generalizes to unseen clauses. A legal tool that knows what it doesn't know.

TRACTION

— Live & shippable

Starter \$29 · Team \$99 · Business \$299. Target: Best Technical Implementation.
